

ARTSOUND SMARTPACK

Assembly

- We mount the ASW55.2 speakers on the outside wall, for example.
- The speakers can be mounted both vertically and horizontally, which is practical under a cross-beam.
- The ArtSound logo can also be rotated.
- Try to spread the speakers around the area where you want to play music.
- Follow the speaker manual for mounting the speakers.
- For the amplification module, you then need to look for a place indoors, for example near the television, on the top or in a cupboard,...
- Don't forget that the module needs a network, preferably a LAN (network) connection; Wifi is also possible, but a stable wireless network is required.

Connections and cables

- Provide a speaker cable between the two speakers and the SMART HYDE.
- A distance of 15 to 20m can be achieved with 2x1.5mm², if the distance is greater, we recommend a wire section of 2x2.5mm².
- Respect the +- connection points, as this is important for correct sound reproduction.

SMART HYDE connection

Speaker cable

- 230V (plug) required for the SMART HYDE, possibly also a LAN (network) connection.

LAN cable

Startup

- First connect all the cables (speakers and possibly network), then plug in.
- Continue to follow the SMART HYDE manual to set up and operate the unit.
